

Summary of doctoral thesis
master Krzysztof Jarosz

"British and German Air Forces from 1939 to 1945. Comparative analysis of the warfare".

This dissertation describes the participation of the Royal Air Force - Air Force of the United Kingdom and Ireland, and the Luftwaffe - the German Air Forces of the Third Reich, during the Second World War, which, especially in the first half of the duration of world conflict, were the most important participants in the war. This is a description of their participation in the conflict, especially the staffs decision about the vision, strategy and tactics of the air forces, and it`s development and operation. Dissertation draws attention not only on the course of each operation, examine the balance of activities, or evaluate the effectiveness of bombing raids, but also on the staffs decisions about the courses of action, the development of aviation, and the reasons which guided the commander taking concrete decisions.

Dissertation contains the most important information about operations carried out by the RAF and Luftwaffe during the Second World War, however, particular emphasis was to show the decision of the German and British staff officers about the using of the Air Forces. This doctoral thesis presents the struggle of the RAF and Luftwaffe in chronological order, divided into rivalry different types of Air Force fighter, bomber and naval aviation, as well as taking into account the special operations, in which the share of aviation was significant.

Text dissertation is divided into five chapters, four of which is a brief description of the history of aviation, and the presentation of individual operations and battles involving the RAF and Luftwaffe during World War II. The last chapter, and the conclusion are a synthesis of earlier considerations and provide a summary of the entire dissertation.
